ATE MASTER/SLAVE PARALLEL CABLE KIT

1. DESCRIPTION

Kepeco KIT 219-0609 is comprised of a single cable used to connect the rear programming connector terminals of two ATE power supplies in order to allow a master/slave parallel configuration. Parallel connections for output and sense terminals are not part of the cable and must be made separately.

2. APPLICABILITY

This KIT applies to all full rack, 3/4 rack and 1/2 rack ATE power supplies.

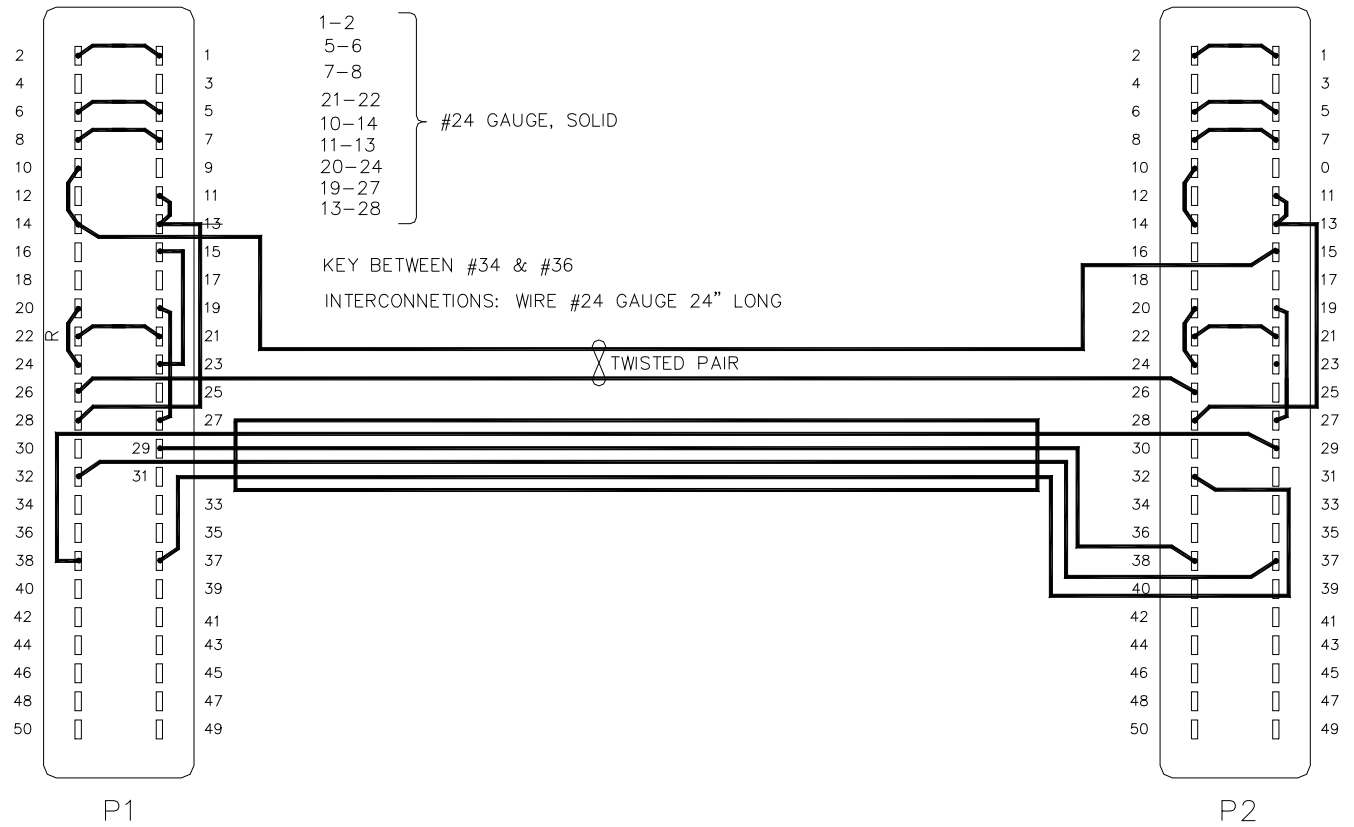

3. INSTALLATION INSTRUCTIONS

The cable supplied with this KIT (see Figure 1) has two rear programming connectors which have been preconfigured. Install the connector labeled MASTER at the rear panel of the ATE power supply to function as the Master, and install the connector labeled SLAVE at the rear panel of the ATE power supply to function as the slave.
